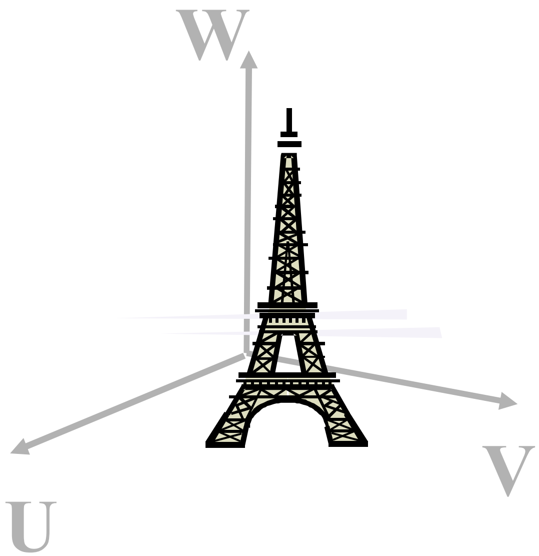
Lecture 13:
Camera Projection II

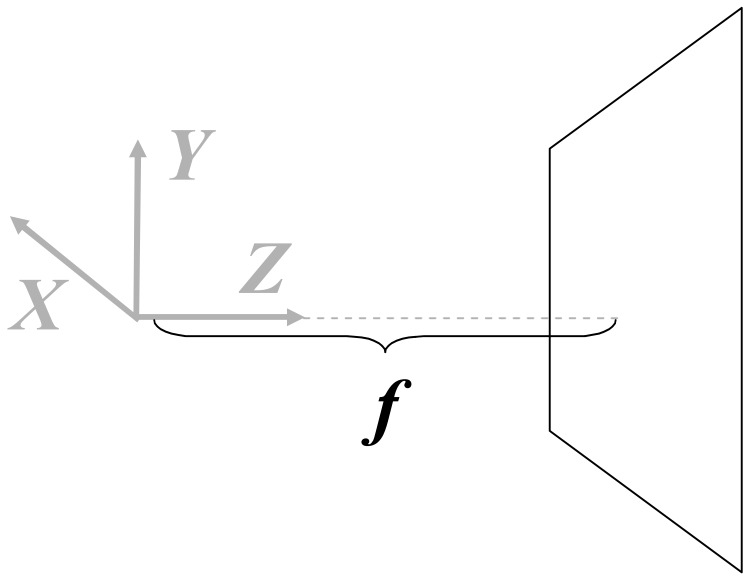
Reading: T&V Section 2.4

Recall: Imaging Geometry

Object of Interest in World Coordinate System (U,V,W)



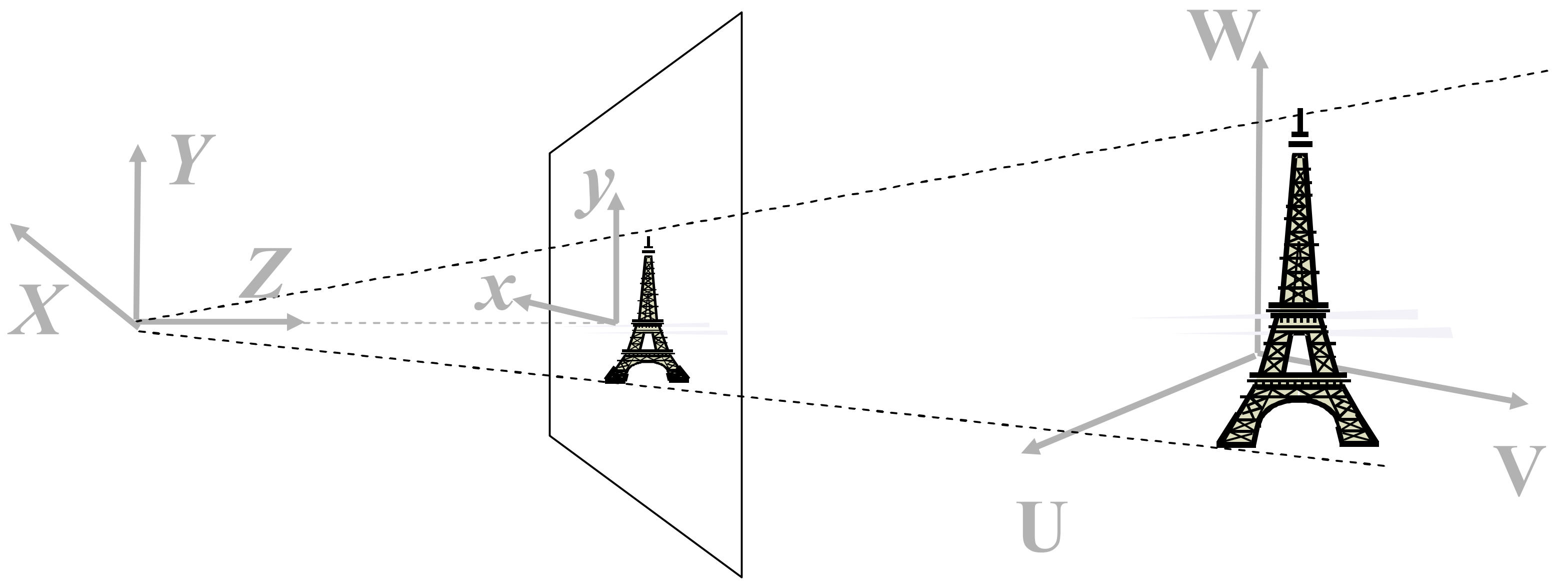
Imaging Geometry



Camera Coordinate System (X,Y,Z).

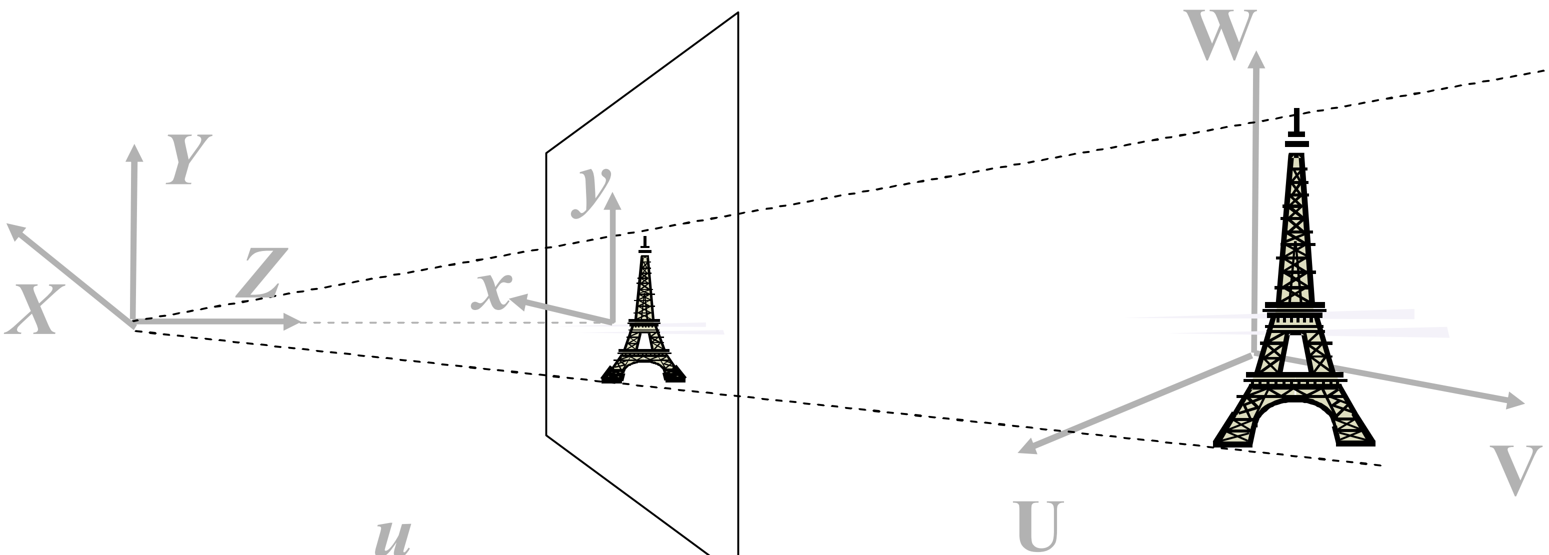
- Z is optic axis
- Image plane located f units out along optic axis
- f is called focal length

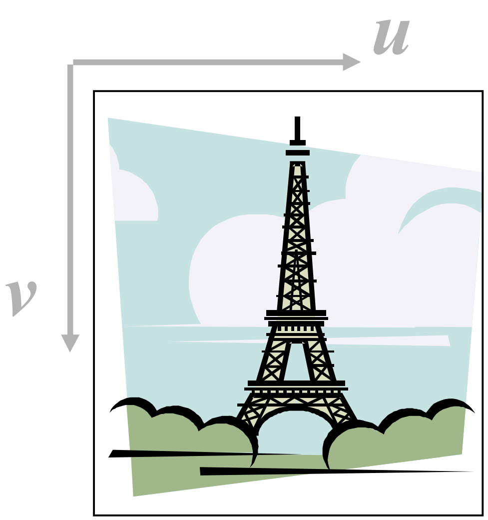
Imaging Geometry



Forward Projection onto image plane.
3D (X,Y,Z) projected to 2D *(x,y)*

Imaging Geometry

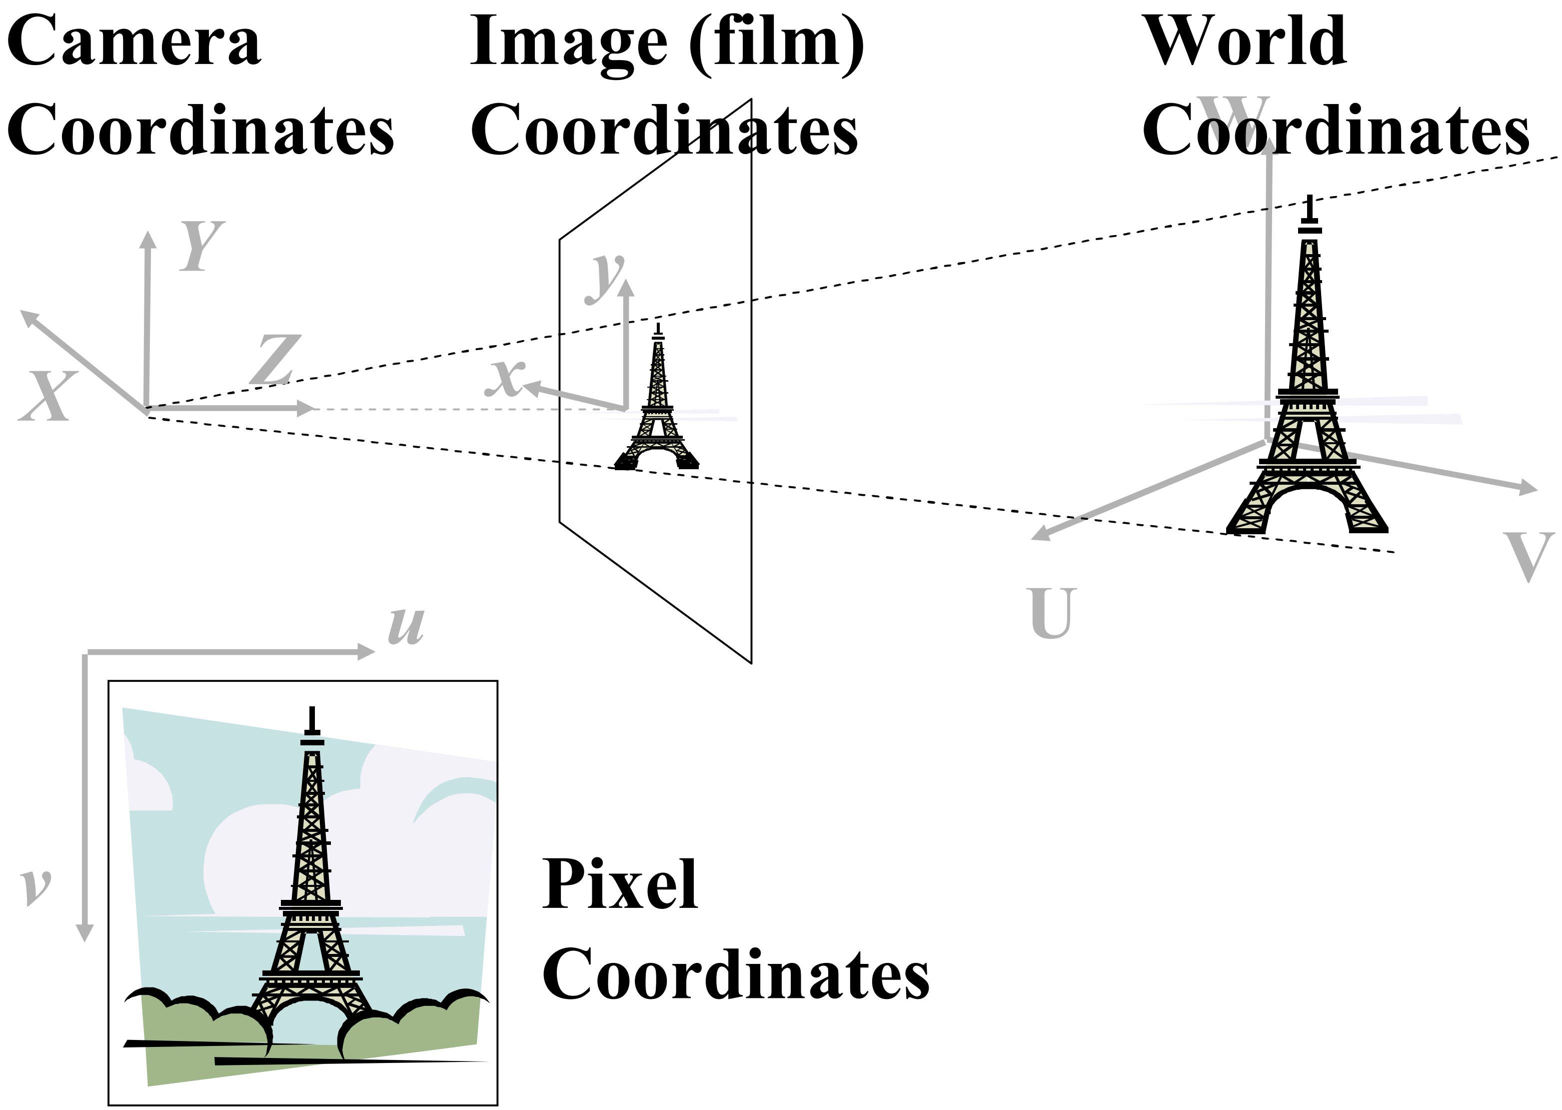




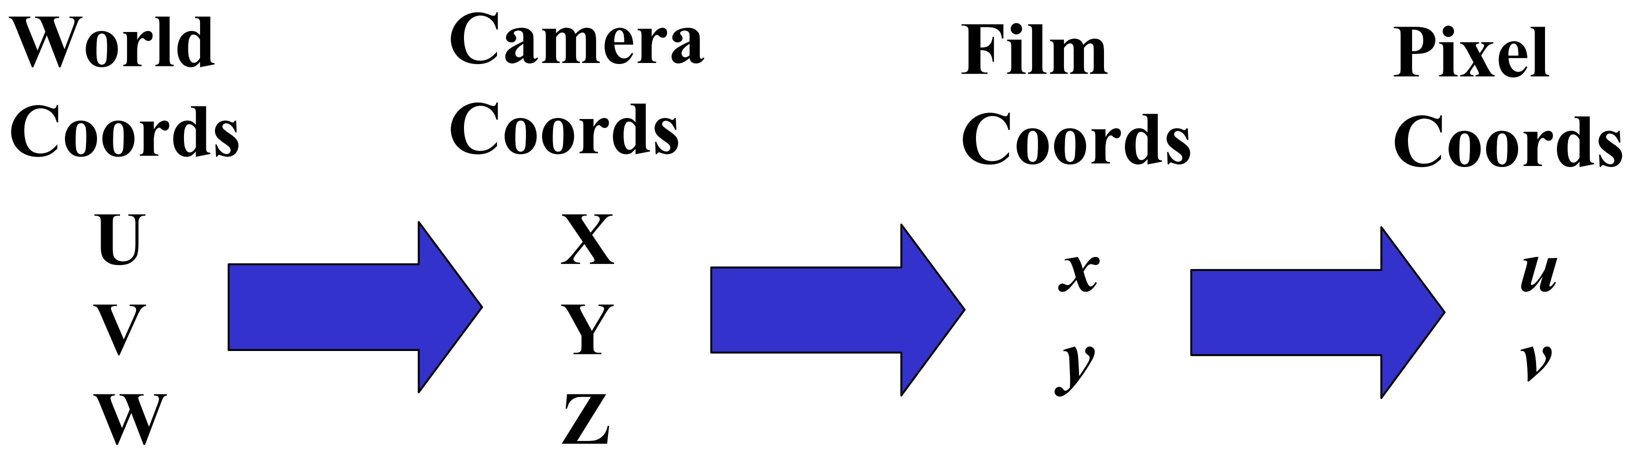
Our image gets digitized into pixel coordinates *(u,v)*

Robert Collins
CSE486, Penn State

Imaging Geometry



Forward Projection

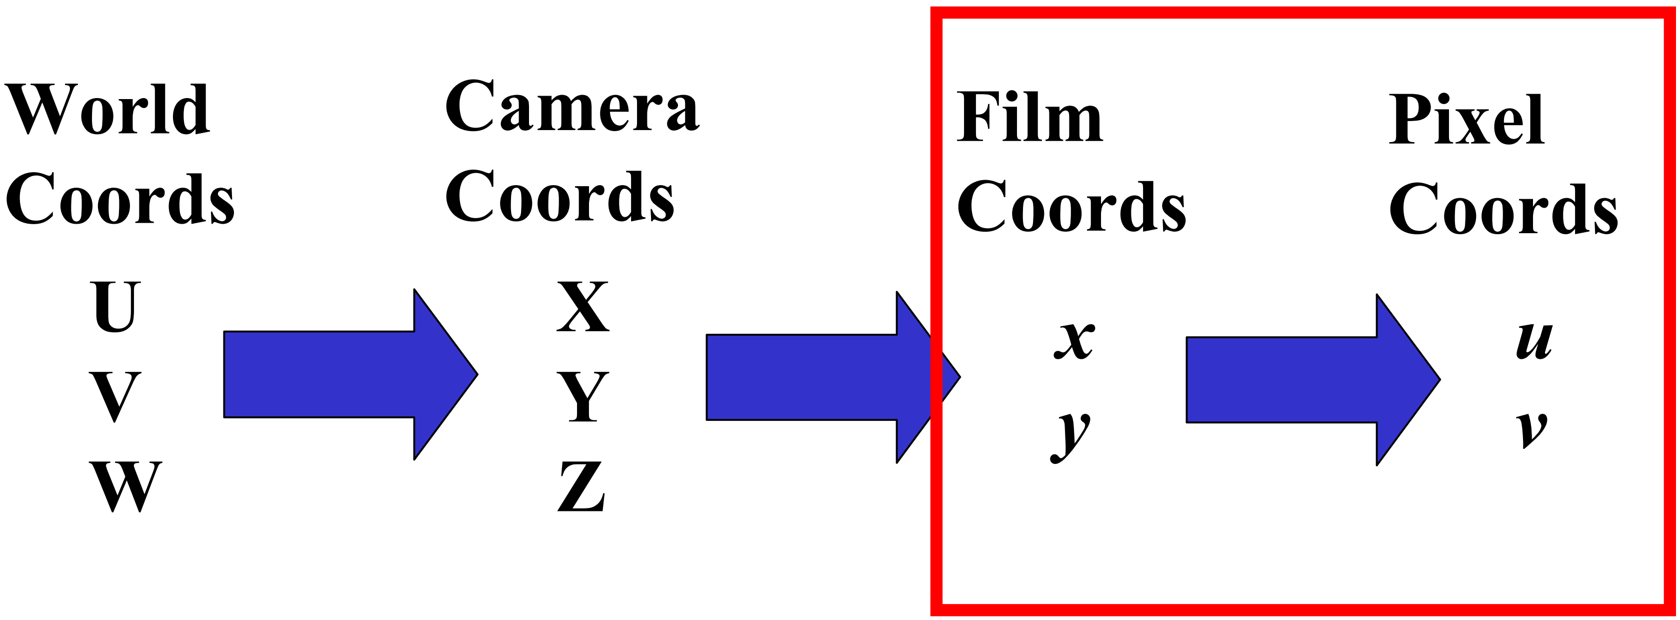


We want a mathematical model to describe how 3D World points get projected into 2D Pixel coordinates.

Our goal: describe this sequence of transformations by a big matrix equation!

Robert Collins
CSE486, Penn State

Intrinsic Camera Parameters



Affine Transformation

Intrinsic parameters

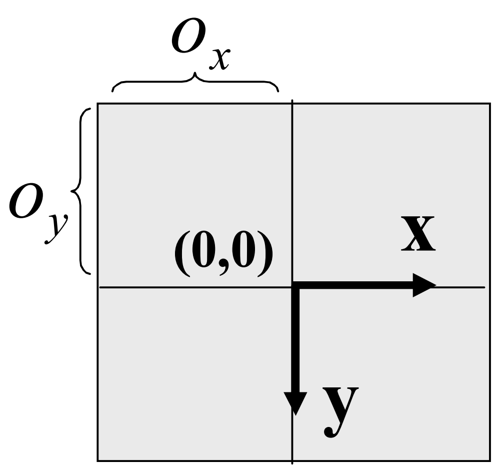
- Describes coordinate transformation between film coordinates (projected image) and pixel array
- Film cameras: scanning/digitization
- CCD cameras: grid of photosensors

still in T&V section 2.4

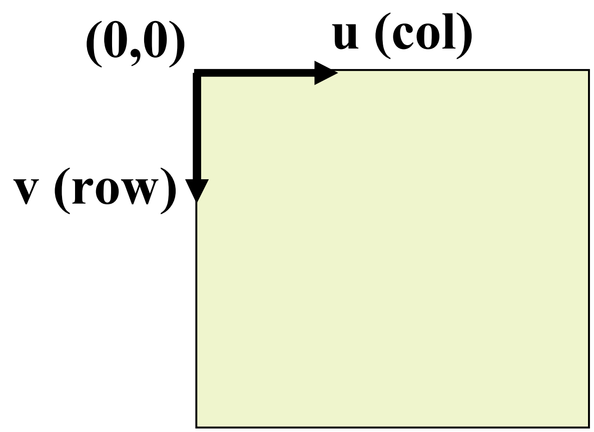
Robert Collins
CSE486, Penn State

Intrinsic parameters (offsets)

film plane
(projected image)



pixel array



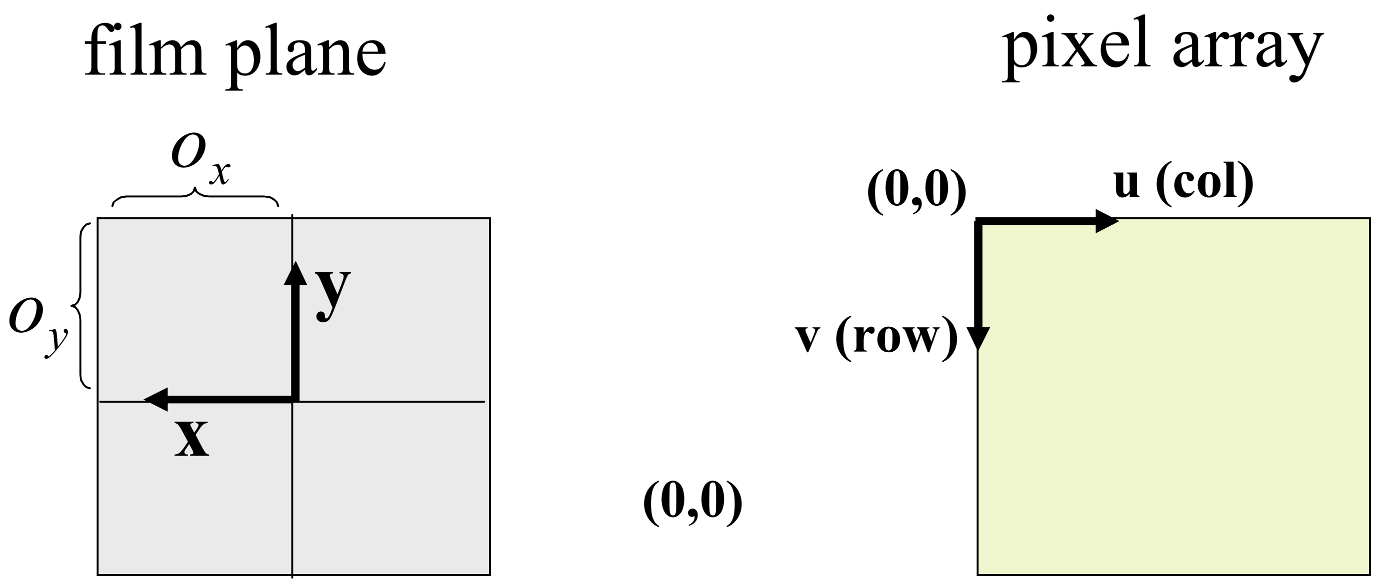
$$u = f\frac{X}{Z} + o_x \qquad v = f\frac{Y}{Z} + o_y$$

o_x and o_y called image center or principle point

Robert Collins
CSE486, Penn State

Intrinsic parameters

sometimes one or more coordinate axes are flipped (e.g. T&V section 2.4)

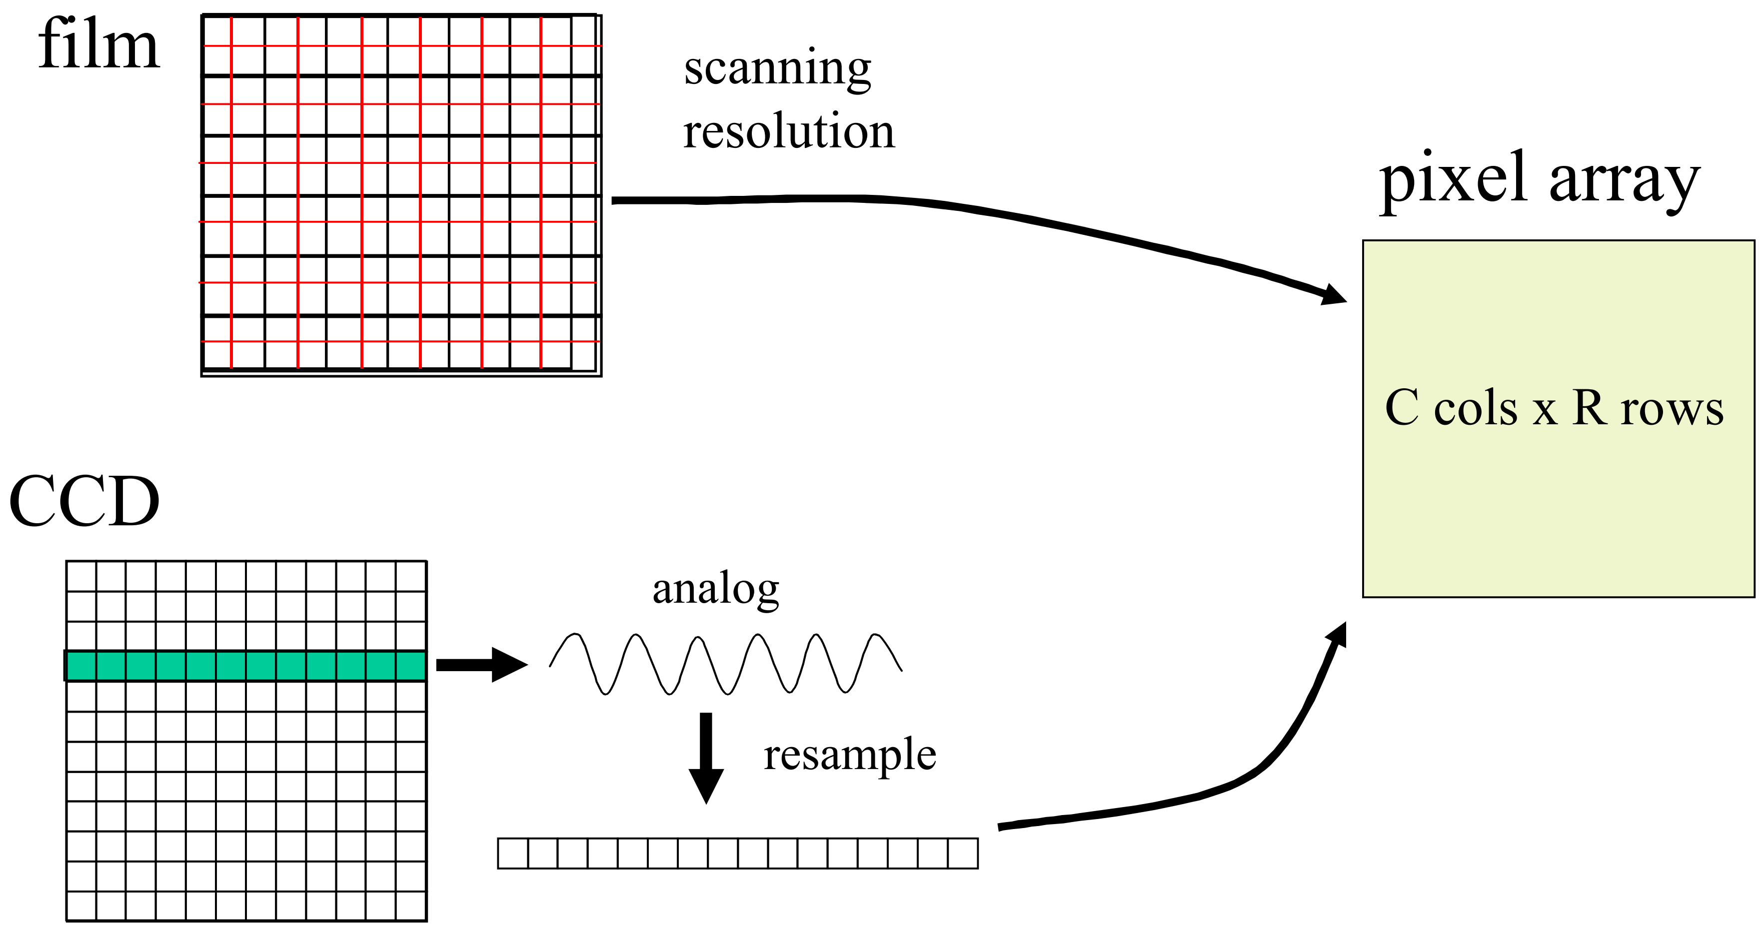


$$u = -f\frac{X}{Z} + o_x \qquad v = -f\frac{Y}{Z} + o_y$$

Robert Collins
CSE486, Penn State

Intrinsic parameters (scales)

sampling determines how many rows/cols in the image



Effective Scales: s_x and s_y

$$u = \frac{1}{s_x} f \frac{X}{Z} + o_x \qquad v = \frac{1}{s_y} f \frac{Y}{Z} + o_y$$

Note, since we have different scale factors in x and y, we don't necessarily have square pixels!

Aspect ratio is s_y / s_x

Perspective projection matrix

Adding the intrinsic parameters into the perspective projection matrix:

$$\begin{bmatrix} x' \\ y' \\ z' \end{bmatrix} = \begin{bmatrix} f/s_x & 0 & o_x & 0 \\ 0 & f/s_y & o_y & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix} \begin{bmatrix} X \\ Y \\ Z \\ 1 \end{bmatrix}$$

To verify:

$$u = \frac{x'}{z'} \qquad v = \frac{y'}{z'}$$

$$u = \frac{1}{s_x} f \frac{X}{Z} + o_x \qquad v = \frac{1}{s_y} f \frac{Y}{Z} + o_y$$

Robert Collins
CSE486, Penn State

Note:

Sometimes, the image and the camera coordinate systems have opposite orientations: [the book does it this way]

$$f\frac{X}{Z} = -(u - o_x)s_x$$

$$f\frac{Y}{Z} = -(v - o_y)s_y$$

$$\Longrightarrow \begin{bmatrix} x' \\ y' \\ z' \end{bmatrix} = \begin{bmatrix} -f/s_x & 0 & +o_x & 0 \\ 0 & -f/s_y & +o_y & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix} \begin{bmatrix} X \\ Y \\ Z \\ 1 \end{bmatrix}$$

Note 2

In general, I like to think of the conversion as a separate 2D affine transformation from film coords (x,y) to pixel coordinates (u,v):

$$\begin{pmatrix} u' \\ v' \\ w' \end{pmatrix} = \underbrace{\begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ 0 & 0 & 1 \end{pmatrix}}_{\mathbf{M_{aff}}} \underbrace{\begin{bmatrix} f & 0 & 0 & 0 \\ 0 & f & 0 & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix}}_{\mathbf{M_{proj}}} \begin{bmatrix} X \\ Y \\ Z \\ 1 \end{bmatrix}$$

$$\mathbf{u} = \mathbf{M_{int}}\,\mathbf{P_C} = \mathbf{M_{aff}}\,\mathbf{M_{proj}}\,\mathbf{P_C}$$

Huh?

Did he just say it was "a fine" transformation?

No, it was "affine" transformation, a type of 2D to 2D mapping defined by 6 parameters.

More on this in a moment...

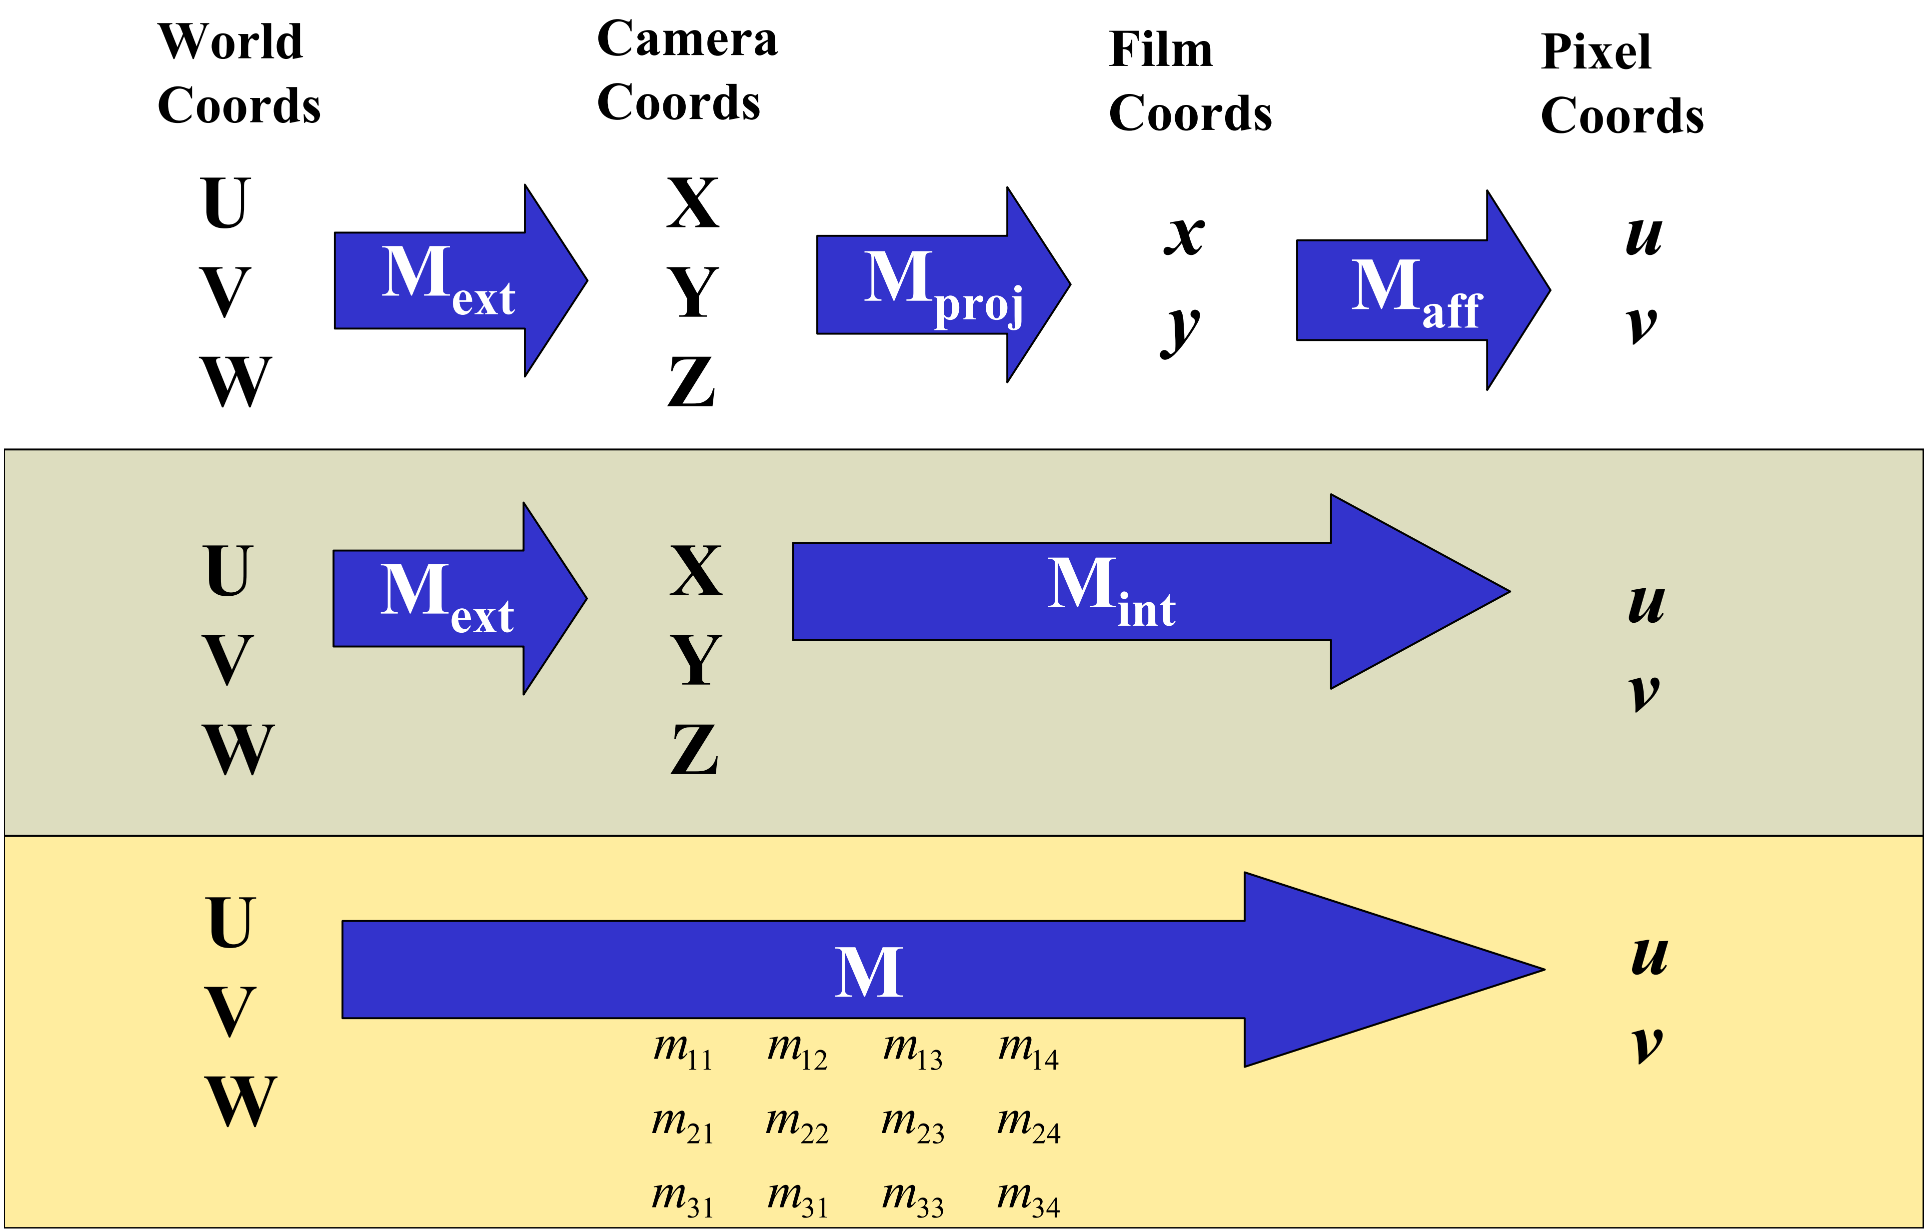
Summary : Forward Projection



Robert Collins
CSE486, Penn State

Summary: Projection Equation

Film plane to pixels — Perspective projection — World to camera

$$\begin{bmatrix} u \\ v \\ 1 \end{bmatrix} \sim \underbrace{\underbrace{\begin{bmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ 0 & 0 & 1 \end{bmatrix}}_{\mathbf{M_{aff}}} \underbrace{\begin{bmatrix} f & 0 & 0 & 0 \\ 0 & f & 0 & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix}}_{\mathbf{M_{proj}}}}_{\mathbf{M_{int}}} \underbrace{\begin{bmatrix} r_{11} & r_{12} & r_{13} & t_x \\ r_{21} & r_{22} & r_{23} & t_y \\ r_{31} & r_{32} & r_{33} & t_z \\ 0 & 0 & 0 & 1 \end{bmatrix}}_{\mathbf{M_{ext}}} \begin{bmatrix} U \\ V \\ W \\ 1 \end{bmatrix}$$

The product $\mathbf{M_{int}}\,\mathbf{M_{ext}}$ is **M**.

Lecture 13/14:
Intro to Image Mappings

Robert Collins
CSE486, Penn State

Image Mappings
Overview

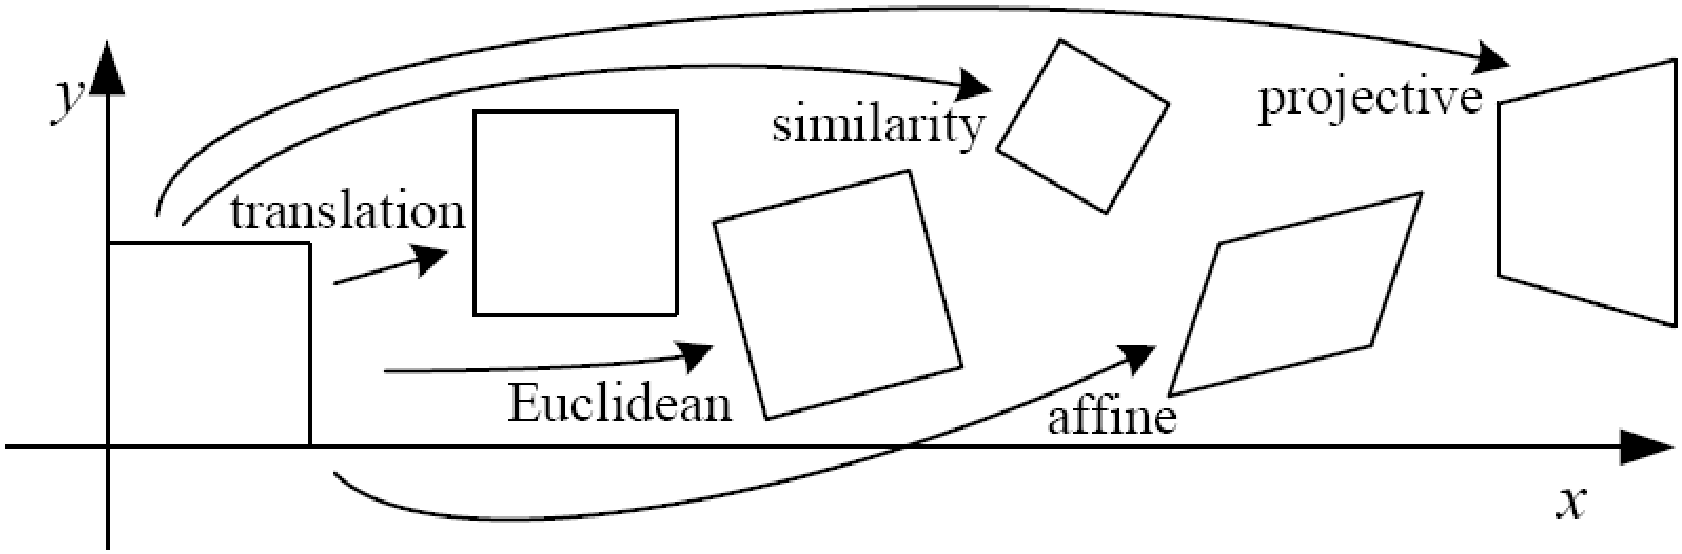


FIGURE 1. Basic set of 2D planar transformations

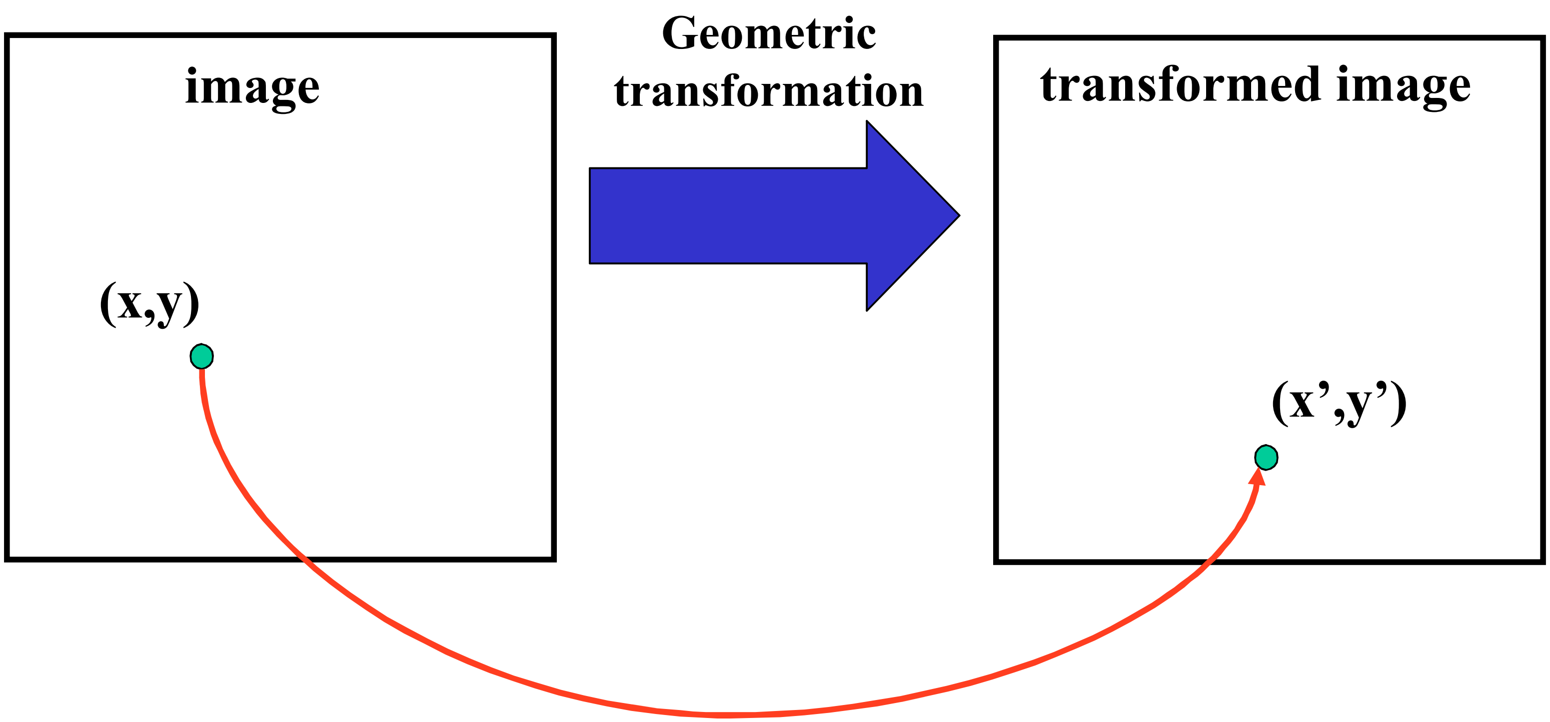
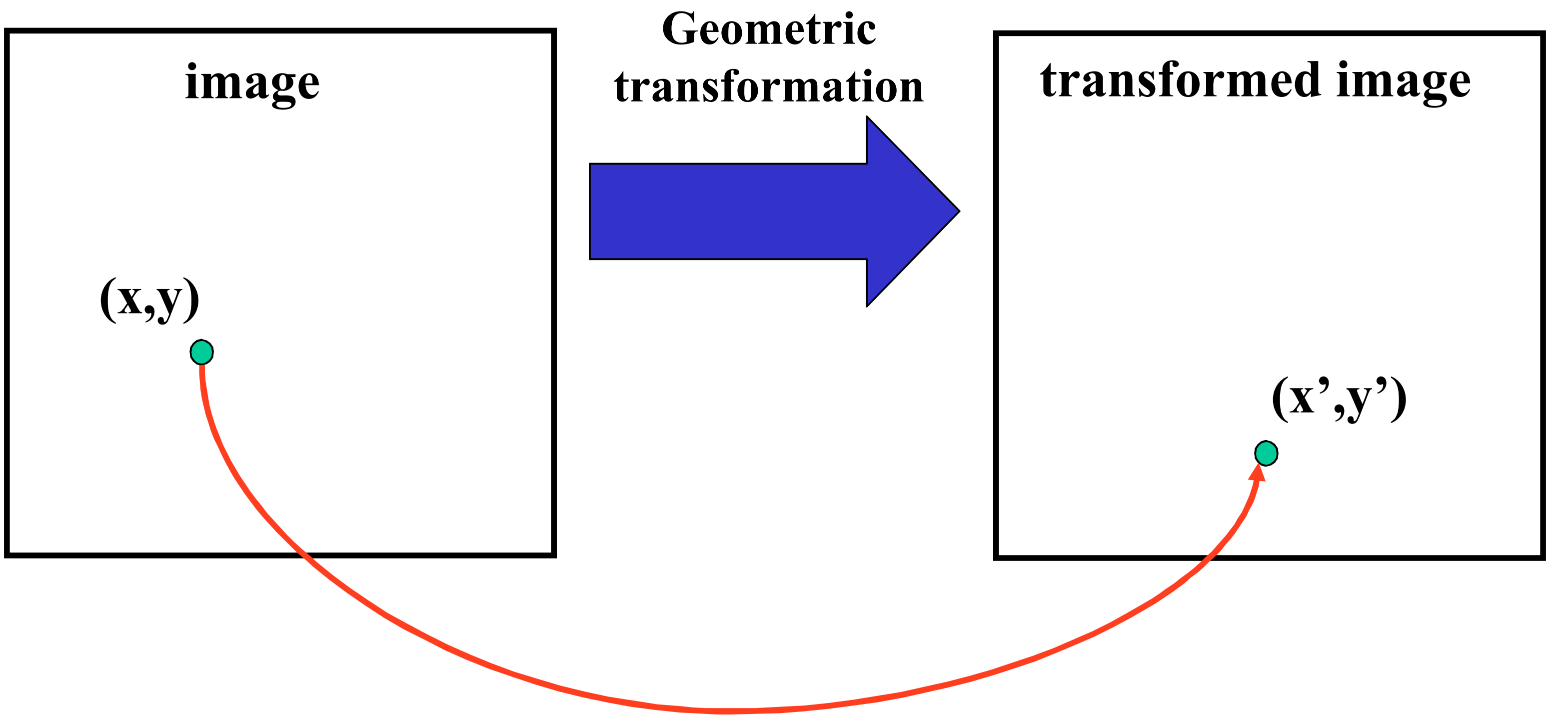
Robert Collins
CSE486, Penn State

Geometric Image Mappings



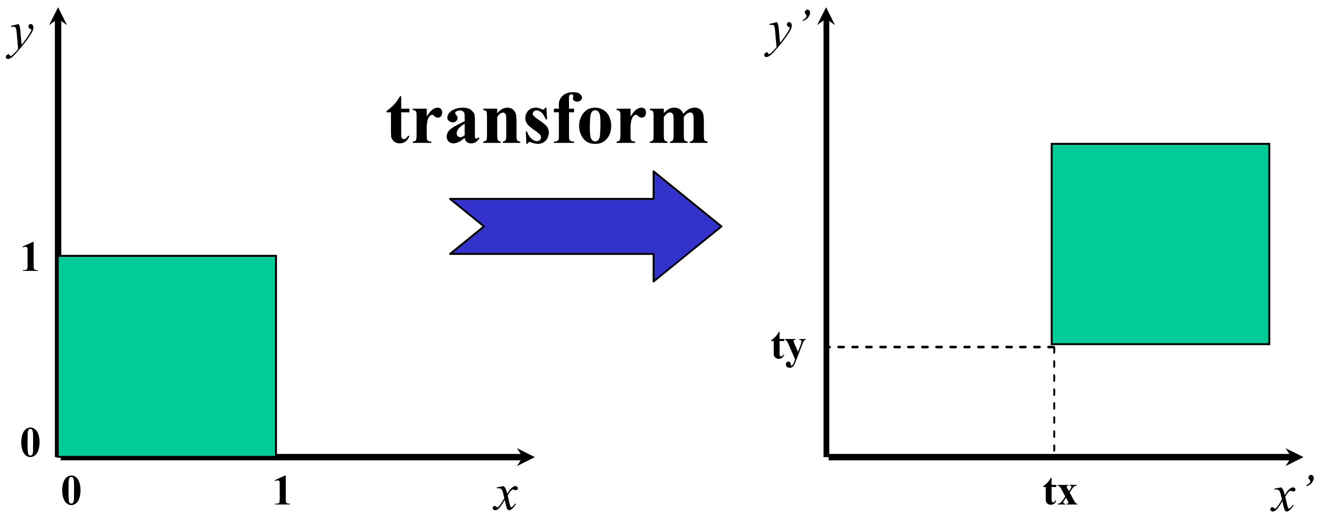
$$x' = f(x, y, \{parameters\})$$
$$y' = g(x, y, \{parameters\})$$

Linear Transformations
(Can be written as matrices)



$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{pmatrix} \\ M(params) \\ \\ \end{pmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

Translation



$$x' = x + t_x$$
$$y' = y + t_y$$

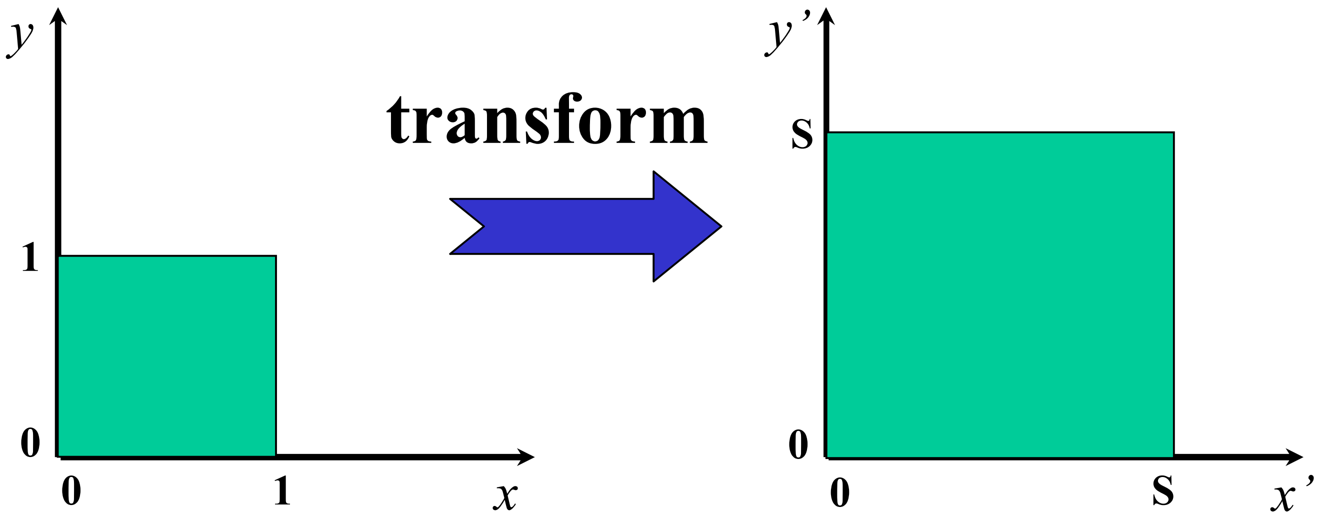
equations

$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} 1 & 0 & t_x \\ 0 & 1 & t_y \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

matrix form

Robert Collins
CSE486, Penn State

Scale



$$x' = s\,x_i$$
$$y' = s\,y_i$$

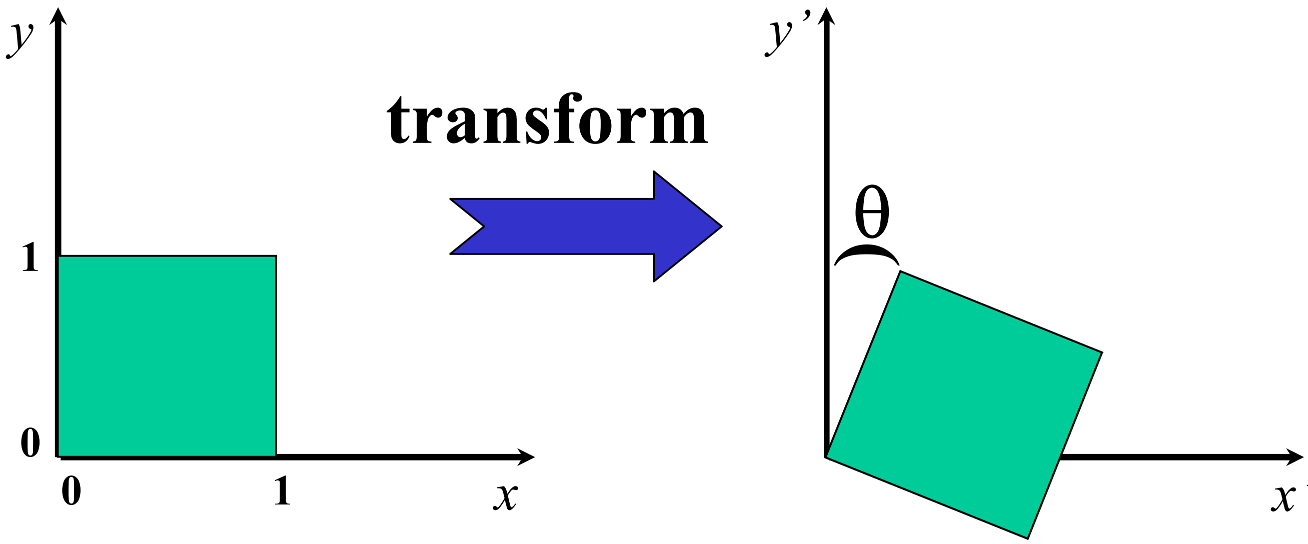
equations

$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} s & 0 & 0 \\ 0 & s & 0 \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

matrix form

Robert Collins
CSE486, Penn State

Rotation



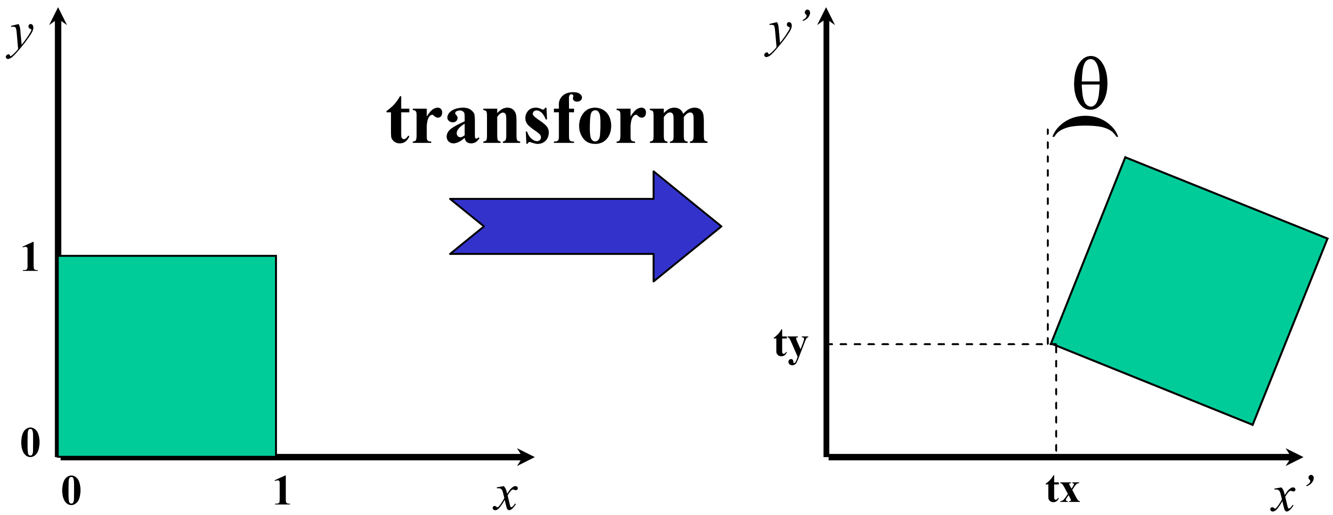
$$x' = x_i \cos\theta - y_i \sin\theta$$
$$y' = x_i \sin\theta + y_i \cos\theta$$

equations

$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} \cos\theta & -\sin\theta & 0 \\ \sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

matrix form

Euclidean (Rigid)



$$x' = x_i \cos\theta - y_i \sin\theta + t_x$$
$$y' = x_i \sin\theta + y_i \cos\theta + t_y$$

equations

$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} \cos\theta & -\sin\theta & t_x \\ \sin\theta & \cos\theta & t_y \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

matrix form

Robert Collins
CSE486, Penn State

Partitioned Matrices

A *partitioned matrix*, or a *block matrix*, is a matrix M that has been constructed from other smaller matrices. These smaller matrices are called *blocks* or *sub-matrices* of M.

For instance, if we partition the below 5×5 matrix as follows

$$L = \left(\begin{array}{cc|ccc} 1 & 0 & 1 & 2 & 3 \\ 0 & 1 & 1 & 2 & 3 \\ \hline 2 & 3 & 9 & 9 & 9 \\ 2 & 3 & 9 & 9 & 9 \\ 2 & 3 & 9 & 9 & 9 \end{array}\right),$$

then we can define the matrices

$$A = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}, B = \begin{pmatrix} 1 & 2 & 3 \\ 1 & 2 & 3 \end{pmatrix}, C = \begin{pmatrix} 2 & 3 \\ 2 & 3 \\ 2 & 3 \end{pmatrix}, D = \begin{pmatrix} 9 & 9 & 9 \\ 9 & 9 & 9 \\ 9 & 9 & 9 \end{pmatrix}$$

and write L as

$$L = \begin{pmatrix} A & B \\ C & D \end{pmatrix}, \quad \text{or} \quad L = \left(\begin{array}{c|c} A & B \\ \hline C & D \end{array}\right).$$

http://planetmath.org/encyclopedia/PartitionedMatrix.html

Partitioned Matrices

$$\left[\begin{array}{c} x' \\ y' \\ \hline 1 \end{array}\right] = \left[\begin{array}{cc|c} \cos\theta & -\sin\theta & t_x \\ \sin\theta & \cos\theta & t_y \\ \hline 0 & 0 & 1 \end{array}\right] \left[\begin{array}{c} x \\ y \\ \hline 1 \end{array}\right]$$

$$\begin{bmatrix} \overset{2x1}{p'} \\ \overset{1x1}{1} \end{bmatrix} = \begin{bmatrix} \overset{2x2}{R} & \overset{2x1}{t} \\ \overset{1x2}{0} & \overset{1x1}{1} \end{bmatrix} \begin{bmatrix} \overset{2x1}{p} \\ \overset{1x1}{1} \end{bmatrix}$$

matrix form

$$p' = Rp + t$$

equation form

Another Example (from last time)

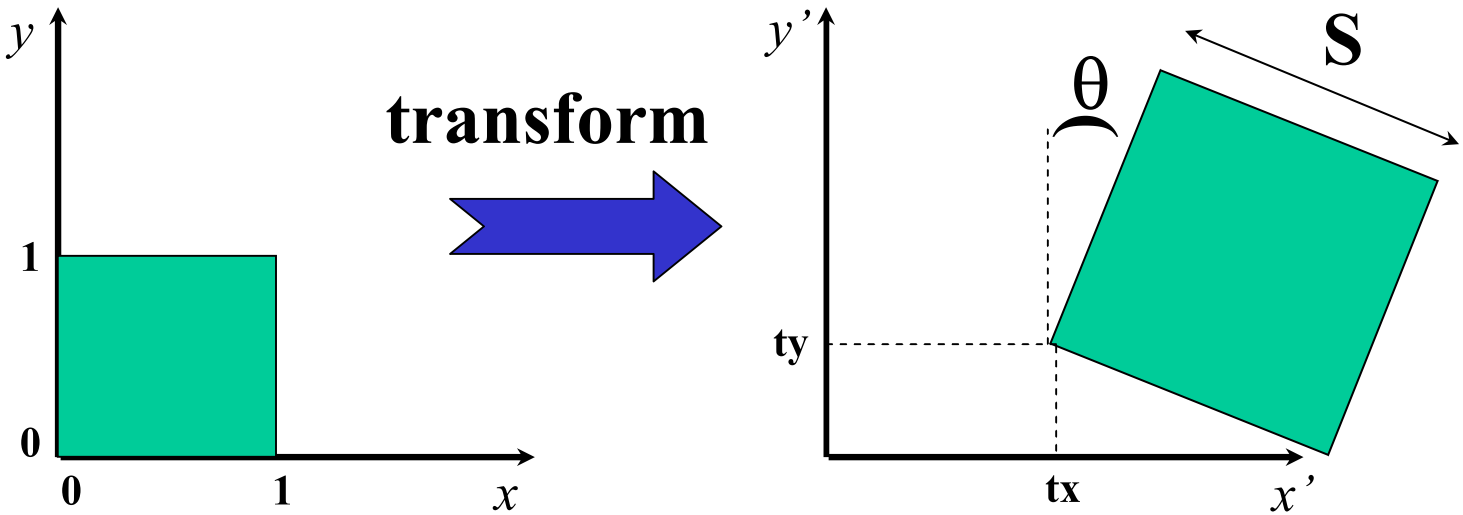
$$\begin{pmatrix} X \\ Y \\ Z \\ \hline 1 \end{pmatrix} = \left(\begin{array}{ccc|c} r_{11} & r_{12} & r_{13} & t_x \\ r_{21} & r_{22} & r_{23} & t_y \\ r_{31} & r_{32} & r_{33} & t_z \\ \hline 0 & 0 & 0 & 1 \end{array}\right) \begin{pmatrix} U \\ V \\ W \\ \hline 1 \end{pmatrix}$$

$$\underset{1\text{x}1}{\overset{3\text{x}1}{\begin{pmatrix} \mathbf{P_C} \\ 1 \end{pmatrix}}} = \begin{pmatrix} \overset{3\text{x}3}{\mathbf{R}} & \overset{3\text{x}1}{\mathbf{T}} \\ \overset{1\text{x}3}{0} & \overset{1\text{x}1}{1} \end{pmatrix} \begin{pmatrix} \overset{3\text{x}1}{\mathbf{P_W}} \\ \overset{1\text{x}1}{1} \end{pmatrix}$$

$$\mathbf{P_C = R\, P_W + T}$$

Robert Collins
CSE486, Penn State

Similarity (scaled Euclidean)



$$p' = sRp + t$$

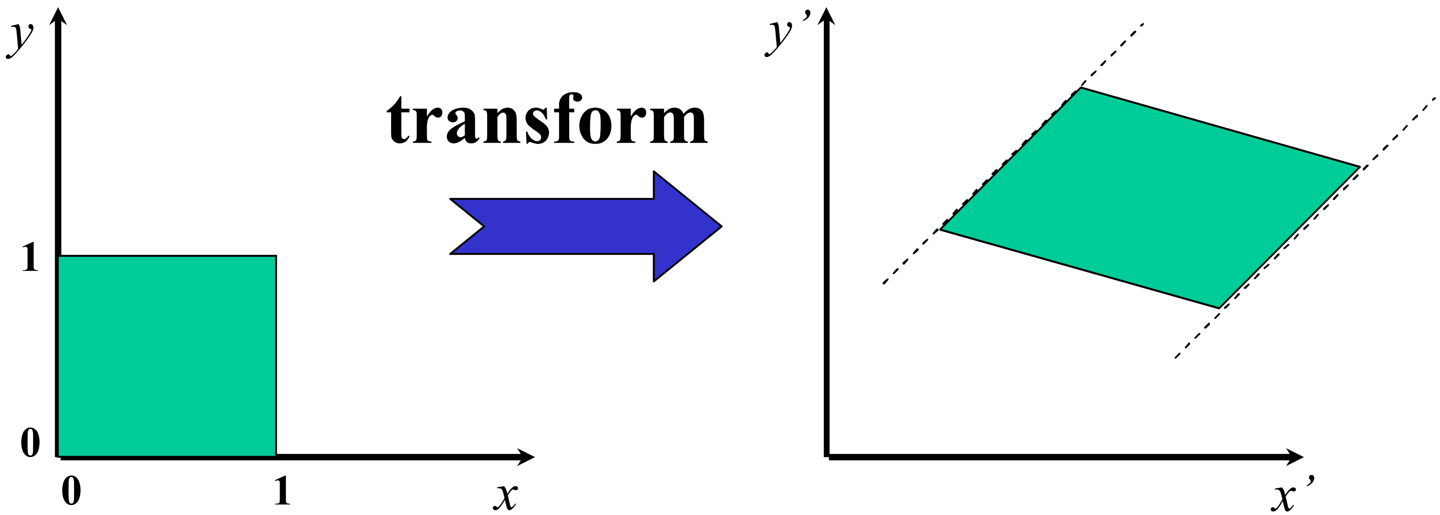
equations

$$\begin{bmatrix} p' \\ 1 \end{bmatrix} = \begin{bmatrix} sR & t \\ 0 & 1 \end{bmatrix} \begin{bmatrix} p \\ 1 \end{bmatrix}$$

matrix form

Robert Collins
CSE486, Penn State

Affine



$$p' = Ap + b$$

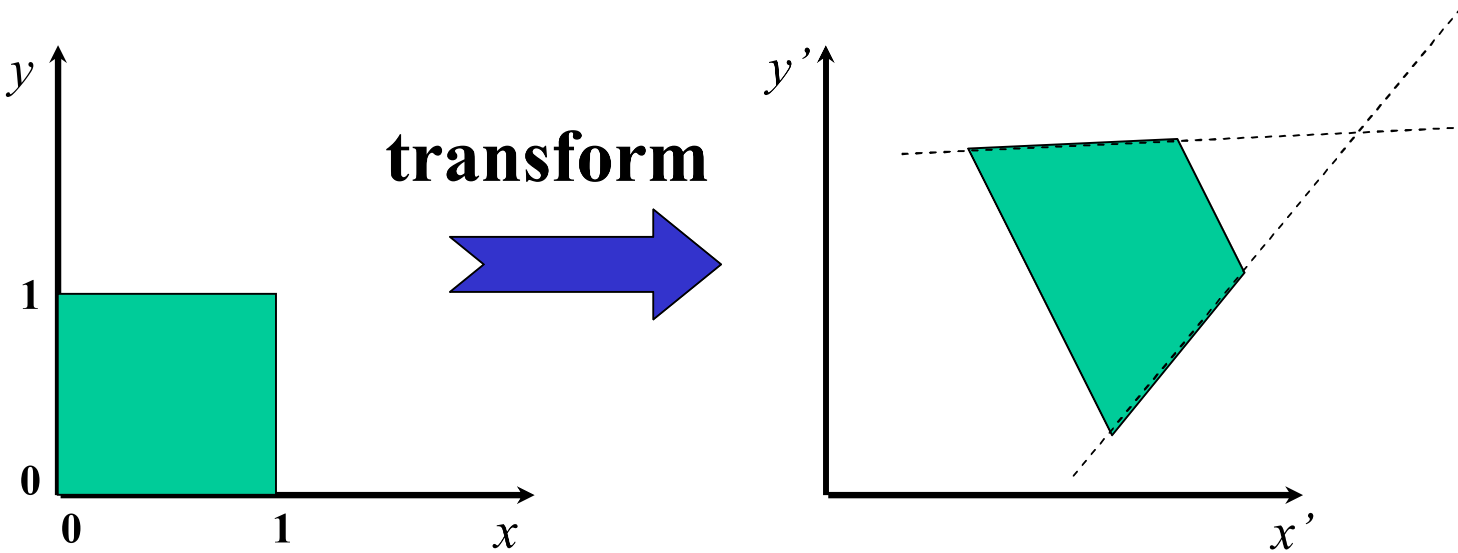
equations

$$\begin{bmatrix} p' \\ 1 \end{bmatrix} = \begin{bmatrix} A & b \\ 0 & 1 \end{bmatrix} \begin{bmatrix} p \\ 1 \end{bmatrix}$$

matrix form

Robert Collins
CSE486, Penn State

Projective



Note!

$$p' = \frac{Ap + b}{c^T p + 1}$$

equations

$$\begin{bmatrix} p' \\ 1 \end{bmatrix} \sim \begin{bmatrix} A & b \\ c^T & 1 \end{bmatrix} \begin{bmatrix} p \\ 1 \end{bmatrix}$$

matrix form
